README

qcadoo MES - open source modular manufacturing management system

website: www.qcadoo.com

authors: Qcadoo Limited and the projects Community

email: welcome@qcadoo.com

Installation

qcadoo MES is a **server web application**. Because of this it's **not trivial to install** but once you do it then everyone in your local network will have access to the system through a **browser**.

The installation process requires some basic technical skills. Please read the Installation Guide:

http://wiki.qcadoo.org/display/QCDMESDOC/Installation+Guide

if you need step by step instructions how to install qcadoo MES in to your LAN network

If you would just like to start working with qcadoo MES and **not worry about the systems configuration, updates and backups** then we recommend to **buy it as a hosted internet application** from Qcadoo in the Software as a Service model (called SaaS in short). Please see the How to buy page:

http://www.qcadoo.com/en/how-to-buy.html

for more details.

More information

Read more about qcadoo MES functionality on the web site:

http://www.qcadoo.com/en/production-management-system/features.html

and in the User Documentation:

http://wiki.qcadoo.org/display/QCDMESUSRDOC/English

If you need any help please feel free to ask questions on our forum:

http://forum.qcadoo.org

or report bugs and feature requests on our issue tracker:

http://issues.qcadoo.org

You can also plan new modules with us on the blueprints wiki:

http://wiki.qcadoo.org/display/QCDMESBLP/Home

If you would like to learn how to program modules for qcadoo MES please have a look at the Developers Documentation:

http://wiki.qcadoo.org/display/QCDMESDOC/Home
